

NORTHSIDE VISION

WHY WE RECOMMEND AN OPTOMAP RETINAL SCAN

As your eye care provider, our primary mission is to help ensure you do not outlive your precious eyesight. The best way to help you enjoy lifetime performing vision is through the earliest possible detection and treatment of eye disease. Accordingly, Dr. Fairborn highly recommends all patients have an advanced retinal screening once each year as part of their vision exam.

This laser scan is called an **optomap®** and it quickly and comfortably captures a panoramic image of the inside of your eyes. This advanced technology's \$38 copayment is not yet covered by most insurance companies (though the nation's largest vision plan, VSP, recommends it to all policyholders). While appreciating that most of us have limited healthcare budgets, Dr. Fairborn recommends this advanced technology because research indicates it is a powerful tool to help you protect your eyesight.

Please indicate below whether you would like an **optomap®** retinal scan today.

- YES: I would like the benefits of a laser retinal scan today.
- NO: I assume the risk of foregoing this advanced screening tool at this time.
